

DRUKKERIJ TIELEN^{DT}

Delivery of High-Res PDF v8

We would like to receive a High-Res PDF. By using the attached settings and method it is very easy to produce a High-Res PDF.

1. General colour settings CC

For the correct colour setting use the following method:

- Open the CC program "Bridge".
- Select the drop-down menu "Edit" > "Colour settings Creative Suite".
- Now click "Europa, web/internet 2" and select "Apply".

It is possible that "Europa, web/internet 2" is not displayed. If that is the case, select "show extended list" on the bottom left. "Europa, web/internet 2" should be included now.

When this is done, all your CC applications are synchronized in colour.

2. Drukkerij Tienen_HighRes_v8.joboptions*

Presets for PDF export from InDesign

Now load the supplied profile "Drukkerij Tienen_HighRes_v8.joboptions" into InDesign by using the drop-down menu "File" > "Adobe PDF presets".

The correct way to create PDF:

- Select "Export" in the drop-down menu "File".
- Select "DrukkerijTienen_HighRes_v8" from the drop-down menu at the top of the export window.
- Before exporting, first check the left column is at "output" > "target" > "ISO Coated v2". If this is not available on your computer "Coated FROGRA 39 (12647-2: 20040)" will also suffice.
- Click "Export" at the bottom right.

If you have any questions, please feel free to contact us.

3. TIELEN controle profiel v5.kfp

Checking profile for Adobe Acrobat preflight

This tool helps you check the created PDF.

Install the following in Adobe Acrobat Professional DC

- Klik on the tab Tools.
- choose "Printproduction" and go in this menu to "Preflight".
- If you are in this menu, click "Options" in the top right corner > "Import preflight profile".
- now you import the supplied profile "TIELEN controle profiel v5.kfp".
- *For old versions of Acrobat, "TIELEN voor oudere acrobat versies v4.kfp" is included.*

Use of this profile

In the preflight window go to "Imported profiles" > "Tienen controle profiel.v5". Now click analyze at the bottom.

Colour check

Go in Acrobat Professional DC to "Tools" > "Print production" > "Output preview".

- Turn OFF the checkmarks of the colors you DO need
- Scroll through your document and if all is well you will only see blank pages.
- Do you still see any text or objects? Then you have set this item in a color that doesn't print. These objects will NOT appear on your printed matter. Adjust this and try again.

* Our presets are based on the GWG profiles, but are modified by us to get an optimal result with our hybrid screens 80 and 100.
